DETAILED ACTION

Allowable Subject Matter

1. Claim 11-14 and 16-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No. 5,012,722 to McCormick is the references closest to the claimed invention. McCormick discloses a method of determining a differential pressure of a fluid by utilizing an electromagnetically drivable actuator for pressure measurement, which actuator comprises an electromagnetic arrangement, in which a mechanical actuating element is movable by means of actuation of an exciter coil, and a valve actuating device for opening and closing the actuator, the method comprising the following steps: exerting a mechanical force with the actuating element for opening and/or closing the actuator on the valve actuating device, controlling the position of the valve actuating device or the magnetic force by means of an electric control circuit, and measuring the hydraulic force acting on the valve actuating device, and calculating the differential pressure from the hydraulic force. However, McCormick does not teach determining at least one characteristic quantity included in the following groups: individual parameters, characteristic curves, and characteristic fields; and determining a current, under consideration of at least one of these quantities, to position the valve actuating device; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
